XTENSIO™

SPREADER

Belongs to a non-ionic adjuvant based on Trisiloxane Alkoxylate, it dramatically lowers the surface tension of spray solutions beyond what conventional adjuvants achieve. This leads to a notable improvement in the spread of spray solutions across plant surfaces, enabling tank mix products to reach complex and hard-to-access areas of the plant.

Benefits of XTENSIO™

Optimal Tank-Mix Companion: Works well with pesticides, foliar fertilisers, plant growth regulators, and other foliar agri-inputs.

Enhances Spreading and Coverage: Ensures superior spreading and coverage on treated plants, increasing efficacy and lowering spray volumes.

Cost-Effective Performance: Offers an advantageous performance-to-cost ratio.

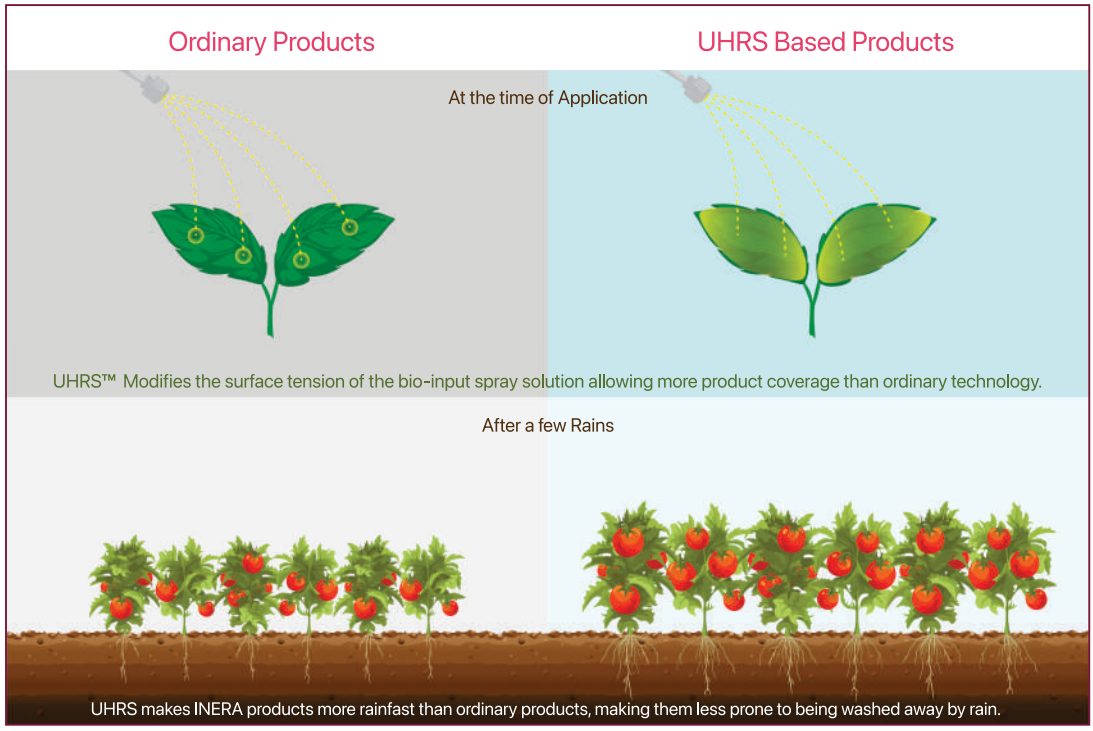

It is compatible with most of the Pesticide formulations and foliar fertilisers.

UHRS™
TECHNOLOGY

Ultra High Range Spreading

UHRS™ Technology modifies the surface tension of any bio-input spray solutions, allowing higher product coverage when sprayed in the fields.

UHRS™ helps INERA's bio-input solutions to not get easily washed away by rain. While ordinary technologies get washed away after 2-3 rains, UHRS™ works effectively for a longer duration of time.

Formulation & SKU

Also Available in:
50 ml
100 ml
250 ml

Liquid
500 ml

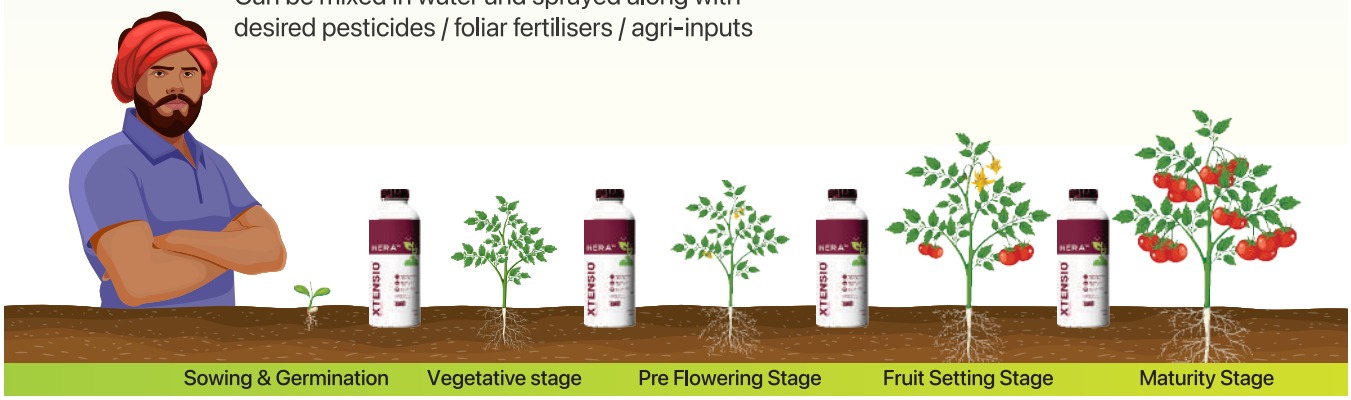

Application & Target Crops

Dosage:

0.25 – 1 ml/litre for all foliar applications.

Application Window:

Can be mixed in water and sprayed along with desired pesticides / foliar fertilisers / agri-inputs

Crops

Suitable for All Crops
